

CSCI 136 C++ programming

Lab exercise 8

Saad Mneimneh
Computer Science
Hunter College of CUNY

Augment lab 7 with an overloading of operator - that takes two points and returns the distance between them. For instance, you should be able to do the following:

```
int main() {  
    Point p=...;  
    Point q=...;  
  
    cout<<'the distance between p and q is '<<p-q<<'\n';  
}
```
